

Individual and Team Action Planning

Harrison's Paradox Technology™ provides individual team members with a clear understanding of their own behaviors that enable them to become more effective team members and leaders. Reports include a mapping of stress behaviors and how those impact individual performance as well as team performance. By assessing team leaders and the entire team's behaviors against key paradoxical principles of leadership, managers can implement practical actions that facilitate mentoring, coaching, building effective working relationships, engagement and retention.

Team members are highlighted by a letter and displayed in conjunction with all other team members. This diagnostic analysis creates an accurate view of how team members interrelate to enable or inhibit team effectiveness.

By applying the analysis to the 12 sets of paradoxical traits used in the Harrison Team diagnostic analysis, you will foster actions to accelerate team performance.

Improve performance, work satisfaction, team effectiveness and build your competitive edge with Harrison Assessment's Team Analysis.
